Subject: Fw: Dimock Residential Ground Water Sampling - Round 2 (Metals) Toxicologist Reports and related DRAFT Residential Data Reports

I know we've talked about the Manganese on 08 , but there was also elevated levels of Chromium up to 13.1 (I think it was for 06) on nearly all the samples and Arsenic above the trigger on one. but not sure where the location is so I can't compare to previous rounds...

Karen D. Johnson, Chief
Ground Water & Enforcement Branch

Subject: Dimock Residential Ground Water Sampling - Round 2 (Metals) Toxicologist Reports and related DRAFT Residential Data Reports

Attached please find PDFs of the Toxicologist Reports and Draft Residential Data Reports for the 4 locations that were re-sampled in May (5/23/12 - 5/24/12).

While the data has been validated and is considered final, the reports are considered DRAFT until our review is completed. Please be sure to limit the distribution of these reports to an internal review as we have not yet shared the data with residents or with PADEP.

The "tox" reports include additional information (e.g. lab qualifiers, MDLs, QLs, RLs) to assist in the tox review which is not included in the residential reports.

Please note that there is a new qualifier (J+). Basically, the J+ indicates that the result may be biased estimated high - based on a QC sample being outside of the acceptable range. An updated key with an official explanation of the J+ will be provided to residents with the data.

Please feel free to contact me with any questions and/or if you need additional info.

Thank you - Kelley
